EDUCATION

Ph.D. student in CS
2015 -
Université Grenoble Alpes, France
Methods and tools to improve and understand multicore application scalability
Advisors: Vivien Quéma and Renaud Lachaize

M.Sc in CS
2013 - 2015
Université Grenoble Alpes, France
Parallel, Distributed and Embedded Systems
With Highest Honors
Rank: 2^{nd}/140

B.Sc in CS
2010 - 2013
Université Grenoble Alpes, France
With Highest Honors
Rank: 1^{st}/120

SKILLS

Prog. languages
• C • Python • C++ • JavaScript
• Java • R • Shell • PHP

Systems
• Linux kernel • POSIX API
• Multicore architectures
• Lock algorithms • Profiling

Technologies
• Oracle RDBMS • Hadoop
• Hive • HDFS

EXTRA INFORMATION

Languages
French: Mother tongue
English: Fluent

EXPERIENCE

Ph.D. student | Aug. 2015 - Present
LIG Laboratory - Operating systems and distributed systems group
Université Grenoble Alpes, France

- Working on profiling tools and runtime approaches for performance on **NUMA** and **multicore architectures**.
- Implemented and evaluated the impact of 19 state-of-the-art **lock algorithms** on 36 real-world applications [1].
- Implemented a coroutine system to **mitigate performance scalability collapse**.
- Teaching **backend web development** to a class of ∼30 undergraduate students.

Research assistant | June 2017 - Sep. 2017
Oracle Labs - Database processing research group
Zurich, Switzerland

- Extended the Oracle Database Smart Scan technology to **execute arbitrary JavaScript predicate (i.e., predicate offloading) on remote big data systems**.

Graduate research assistant | Feb. 2014 - Aug. 2015
LIG Laboratory - Operating systems and distributed systems group
Université Grenoble Alpes, France

- Worked on performance **bottleneck identification** and **mitigation** for multi-tier applications running on multicore architectures.
- Developed Linux **profiling tools** for **performance troubleshooting** in complex software systems (e.g., MySQL).

Undergraduate research assistant | June 2013 - Aug. 2013
INRIA - Parallel algorithms and models group
Université Grenoble Alpes, France

- Extended a **task-based parallel programming language**, providing programmers with the ability to express complex matrix operations.
